

A flexible and fast track solution to combine feeding and maker dedusting.

## SECONDARY SOLUTIONS

### Stand-alone filter

Stand-alone filters for feeding dedusting (FD) and maker dedusting (MD) are used as a temporary solution, for capacity extension or for start-up a cigarette maker until the new FD/MD system is delivered. The filter for FD can be designed to pick-up cut filler from box nearby the cigarette maker or from distance. Both filters achieve a clean gas dust content of  $<1 \text{ mg/m}^3$ , so that the clean air can be returned to production and does not have to be blown outside.

#### ADVANTAGES FOR YOU

- Easy and short installation within 1 day
- Clever and compact design
- Discharge into a C48 box
- Flexible location and relocation
- Beneficial support during start-up phase for a new production

#### FEATURES

- Designed for 24/7 operation
- Low clean gas dust content  $< 1.0 \text{ mg/m}^3$
- Automatic cleaning
- Discharge units with Easy Clean feature
- Design according to ATEX
- Structural explosion protection
- Structural fire protection
